ECS Reference: 17050

**Japanese Knotweed Management at Banks of River Alne, Henley-in-Arden, B95 5GD**

Dear Ray and Marijana,

Based on the survey carried out, ECS proposes that the most suitable course of remediation would be our 3-year herbicidal in situ Management Plan. **See Map 1 in the proposal for more details.** A mixture of both foliar application and stem injection will be used (See survey report for more detailed information and terms and conditions). The above method aims to control the Japanese Knotweed through to **November 2024** as per the proposal document. The costs have been spread over the entire programme to aid with budgeting. Please be aware that ECS are unable to issue an eradication guarantee against these works due to the presence of the watercourse and the potential of flooding and reinfestation from sources upstream.

In situ Japanese knotweed control programme (as per the proposal document) for a yearly price of **£1,100.00 +VAT**

Accounts to be settled within 30 days of invoice: Invoices for the yearly amount to be issued upon completion of the first visit of each year.

This offer is valid for 30 days from date of issue.

Please do not hesitate to contact me should you have any questions on **07535 090679**

Kind regards  
Matt Haikings  
Senior Surveyor
